Jastram Technologies LTD to Distribute Corvus Energy Batteries to Canada's Commercial, Recreational and Military Sectors

Corvus Energy selects Jastram Technologies as its exclusive Canadian partner to distribute Corvus Energy's lithium-ion batteries

Richmond, B.C. — Corvus Energy selected Jastram Technologies Ltd., an internationally renowned distribution company, as its exclusive sales and marketing partner and has charged it with handling all marine applications that are built or originate in Canada, including recreational, commercial, governmental and military segments.

“Jastram has been a highly respected leader in the marine distribution industry for more than 27 years. The company's contacts within the commercial and military supply chains make them the ideal partner to distribute Corvus Energy's batteries,” said Brent Perry, CEO of Corvus Energy. “We've long respected Jastram's level of expertise and technical knowledge and we expect that our partnership will allow both our companies to prosper from the newest and most powerful battery technology available today.”

Corvus batteries are recyclable, powerful enough to replace diesel in heavy machinery, and are priced at a level that will allow a return of investment in a reasonable length of time. Each battery has four times the power and energy storage of a lead-acid battery in half the volume and a quarter of the weight.

“We're proud to support a local Canadian company that's on the leading edge of green technology. Jastram is a strong supporter of companies whose products reduce pollution,” said Shawn Burchett, operations manager for Jastram. “We're honored to be Corvus Energy's exclusive Canadian partner.”

About Corvus Energy:

Corvus Energy is based in Richmond, B.C. and is a 100 percent carbon neutral company that provides industrial-sized power in a compact, modular lithium-ion battery system to the commercial marine industry, transportation industry, ports machinery, remote community, off grid and grid energy markets. Its revolutionary battery packs have the capacity to output sustained power comparable to diesel engines in hybrid and full-electric vessels and vehicles.
